

E-bulletin description – OTBNZ

We are looking for approximately 80-120 participants to take part in online focus groups that will aim to develop preliminary constructs for a MOHO informed assessment tool for people with palliative care needs. Focus groups will be run in several countries to draw on international perspectives and knowledge. Please note we may not be able to include all who are interested in participating.

Focus group participation is open to occupational therapists who work with people who have palliative care or end-of-life needs. You do not need to work full time with this group of people to participate. If you are interested in participating in a focus group which will run for approximately 90-120 minutes, please [click here](#).

This study is being conducted by Dr Deidre Morgan, (Occupational Therapist, Flinders University, South Australia, Australia), Professor Renee Taylor, (UIC, Director of the UIC Model of Human Occupation Clearinghouse, Illinois, USA) and Dr Mack Ivy (Occupational Therapist, MD Anderson Cancer Center, Texas, USA). It has approval from the Social and Behavioural Research Ethics Committee, Flinders University.
